

```
import java.util.Scanner;

class OddEven {
    public static void main(String[] args) {
        Scanner input = new Scanner(System.in);
        System.out.println("Welcome to Number Checker\n ");
        System.out.print("Please enter your number: ");
        int num = input.nextInt();

        if(num % 2==0) {
            System.out.println("Your Number is Even");
        } else{
            System.out.println("Your Number is Odd");
        }
    }
}
```
