

```
import java.util.Scanner;

class PositiveNegativeZero {
    public static void main(String[] args) {
        Scanner input = new Scanner(System.in);
        System.out.println("Welcome to Number Checker\n");
        System.out.print("Please enter your number: ");

        int num = input.nextInt();
        if(num>0) {
            System.out.println("Your Number is Positive");
        }else if(num == 0){
            System.out.println("Your Number is Zero");
        }else{
            System.out.println("Your Number is Negative");
        }
    }
}
```
