

```
import java.util.Scanner;

class FahrenheitTOCelsius {
    public static void main(String[] args) {
        Scanner input = new Scanner(System.in);
        System.out.println("Welcome to Temperature Converter\n");
        System.out.print("Enter your temp in F: ");
        float fah = input.nextFloat();
        float cel = (fah - 32) * 5/9;
        System.out.println("Your temperature is: " + cel + "C");
    }
}
```
